

AMENDMENTS TO THE ABSTRACT

Please cancel the Abstract section of the specification and replace with the following:

A dual rack and pinion system provides for a window lift mechanism. The window lift mechanism includes window brackets for simple mounting to a window. A modular frame design is provided for assembly of the window lift mechanism into the door of a vehicle. An assembly method is provided for the dual rack and pinion system. The system is also provided with a smart motor and incorporates resilient shock absorbers in the dual rack and pinion gear train to allow more time for the smart motor to detect and react to an obstruction between the window and the window frame. The window lift mechanism includes a support bracket mounted to the window and a motor supported on the support bracket, wherein the support bracket permits axial and rotational movement of the window relative to the support bracket.
